

PROJECT FLOW

Date	16 November 2022
Team ID	PNT2022TMID29438
Project Name	AI-Powered Nutrition Analyzer for Fitness Enthusiasts

Project Flow:

- The user interacts with the UI (User Interface) and give the image as input.
- Then the input image is then pass to our flask application,
- And finally with the help of the model which we build we will classify the result and showcase it on the UI.

To accomplish this, we have to complete all the activities and tasks listed below

- **Data Collection:**

- Collect the dataset or create the dataset

- **Data Pre-processing:**

- Import the Image Data Generator library
- Configure Image Data Generator class
- Apply Image Data Generator functionality to Trainset and Testset.

- **Model Building:**

- Import the model building Libraries
- Initializing the model
- Adding Input Layer
- Adding Hidden Layer
- Adding Output Layer
- Configure the Learning Process
- Training and testing the model
- Save the Model

- **Application Building:**

- Create an HTML file.
- Build Python Code.
- Creating our flask application and loading our model by using the load_model method.
- API integration - Connecting front end and back end and perform routing and run the application.

- Run The Application.

- **Deployment Phase:**

- Register For IBM Cloud.
- Cloud Deployment – Train the Model on IBM cloud account.

- **Testing phase:**

- User Acceptance Testing.
- Performance Testing.
